

## HINGED PANEL FLY DOORS

The heavy duty door has a 40 x 25mm box section, providing ultimate strength for regular use in commercial environments. There are many doors on the market which use a wider and narrower aluminium section but these will flex along the length as there is no strength in a narrow section less than 25mm.

### SPECIFICATION

Aluminium frames finished in a durable powder coating, Brown and White available in heavy duty.

Spring loaded hinges.

Magnetic catches to hold the door closed.

Totally rust free for use inside or out.

Mid bar with handles.

Base kick plate to reduce risk of mesh being damaged by people catching it with their feet.

Brush pile in frame to seal with the existing frame.

The standard mesh colour with these doors is Grey, but you can specify any of our colours, Pet mesh or midge mesh.

Handles on mid bar

Optional automatic door closer.

Base kick plate to protect the mesh

Integral brush pile in the profiles to create a seal with the door.
