

MAGNETIC FLY SCREENS

These screens have aluminium frames finished in white polyester coating for ease of cleaning. There are options of having the screens hinged, at the top or sides, magnetic fixings and mid cross bars for adding strength to longer lengths.

The frame is 30mm wide and 10mm deep, mesh is available in Grey, Black, or Sand. The components slot together easily and the mesh is held in place by the rubber gasket and the screens are available ready made or as kits.

The hinges and turn buttons will add an additional 16mm each to the overall dimension.
