

CHAIN SCREENS

Aluminium hanging bar

Chain link size is 12 x 24mm and the anodised wire is 2.2mm in diameter.

The weight of the chain is 3.8kg's per sq metre.

Breaking strain of the chain links is 23kg's

Are all chain screens the same?

Absolutely not! The image shows our chain, on the left, and a competitor's chain on the right. As you can see the competitor's chain is a smaller gauge, less than 1mm in diameter compared to our chain at 2.2mm.

This results in a lighter chain that doesn't hang correctly, letting flies in!

The cheaper chain also has a poor quality finish with the links not closed off correctly.
